

Project Design Phase-I

Solution Architecture

Date	9 October 2022
Team ID	PNT2022TMID34839
Project Name	University Admit Eligibility Predictor
Maximum Marks	4 Marks

Solution Architecture:

- First, the data set that contains the information about previous years' admission criteria was collected and fed in the system for preprocessing as a .CSV file.
- Then with the help of the data set , the model is trained and tested for expected input values by methods like KNN algorithm and regression techniques.
- Finally , with the help of the user interface, inputs from the user is obtained and prediction is done by the model and output is given
