UNIVERSITY ADMIT ELIGIBILITY PREDICTOR

PROBLEM STATEMENT:

The problem include the questions like whether a student will get an admit or not? What are the parameters for solution in the university? What is the probability of being selected by the university? And can it be mathematically expressed? In this case, our objective is to predict whether a student will get an admit or not and the probability of getting admitted based on selection criteria.

OBJECTIVE:

- ❖ It helps student for making decision for choosing a right college.
- ❖ Here the chance of occurrence of error is less when compared with the existing system.
- ❖ It is fast, efficient and reliable.
- ❖ Avoids data redundancy and inconsistency.
- ❖ Easy accessibility of data.
